

Thank you for participating in this experiment.

The purpose was to collect readings of the built-in accelerometer and gyroscope sensors from the phone you were given. The data you collect will be analysed to see whether or not it is accurate enough for fall detection. The results of this study will primarily help the elderly who are most susceptible to falling. I am wanting to see if a phone can be a reliable, inexpensive and easily accessible implementation of fall detection.

The task given to you was/will be the task given to other participants in this experiment.

The data you collected from this experiment and provided in the consent form will be kept anonymous and confidential, and will only be identified using your initials. It will not be shared or distributed. If for any reason you wish to withdraw your data, you may do so within a month of the experiment. Your data will be immediately deleted in response.

If you would like to contact me, please email: phuong.vo@elawnswood.co.uk.

Once again, thank you for taking part.
